

	A	B	C	D	E	F	G
1	Post Secondary Education Option - University of Minnesota						
2	<i>The information on this list may be used as an initial reference for families but should not be relied upon when planning for Honors designation. This is because some courses on this list may no longer be offered at the post-secondary institution or two post-secondary institutions may offer courses with the same titles but without the same content or level of rigor. All PSEO honors designation applications are reviewed individually by studying the course syllabus from that institution. Determinations are made based on the current content of each course.</i> A 3 credit college Statistics class will meet the district Statistics requirements...it will be listed as .75 on the transcript BUT the overall math credits must still be 3.0 credits or more. Example as follows: 9th grade Geom--1.0 10th grade Alg II--1.0 11/12th grade--PSEO, tests into college math and takes the Stats class Now the student has 2.75 credits. We would expect this student to take more math either at college or at their home high school.

This is because some courses on this list may no longer be offered at the post-secondary institution or two post-secondary institutions may offer courses with the same titles but without the same content or level of rigor. All PSEO honors designation applications are reviewed individually by studying the course syllabus from that institution. Determinations are made based on the current content of each course.</i> A 3 credit college Statistics class will meet the district Statistics requirements...it will be listed as .75 on the transcript BUT the overall math credits must still be 3.0 credits or more. Example as follows: 9th grade Geom--1.0 10th grade Alg II--1.0 11/12th grade--PSEO, tests into college math and takes the Stats class Now the student has 2.75 credits. We would expect this student to take more math either at college or at their home high school.

1	Post Secondary Education Option - Bethel						
2	<i>The information on this list may be used as an initial reference for families but should not be relied upon when planning for Honors designation. This is because some courses on this list may no longer be offered at the post-secondary institution or two post-secondary institutions may offer courses with the same titles but without the same content or level of rigor. All PSEO honors designation applications are reviewed individually by studying the course syllabus from that institution. Determinations are made based on the current content of each course.</i> A 3 credit college Statistics class will meet the district Statistics requirements...it will be listed as .75 on the transcript BUT the overall math credits must still be 3.0 credits or more. Example as follows: 9th grade Geom--1.0 10th grade Alg II--1.0 11/12th grade--PSEO, tests into college math and takes the Stats class Now the student has 2.75 credits. We would expect this student to take more math either at college or at their home high school.

2	<i>The information on this list may be used as an initial reference for families but should not be relied upon when planning for Honors designation. This is because some courses on this list may no longer be offered at the post-secondary institution or two post-secondary institutions may offer courses with the same titles but without the same content or level of rigor. All PSEO honors designation applications are reviewed individually by studying the course syllabus from that institution. Determinations are made based on the current content of each course.</i> A 3 credit college Statistics class will meet the district Statistics requirements...it will be listed as .75 on the transcript BUT the overall math credits must still be 3.0 credits or more. Example as follows: 9th grade Geom--1.0 10th grade Alg II--1.0 11/12th grade--PSEO, tests into college math and takes the Stats class Now the student has 2.75 credits. We would expect this student to take more math either at college or at their home high school.
