

9. What is the probability of observing between 100 and 150 cars on the road in an hour?

Briefly describe the overall shape of each distribution. Two or 3 points are marked on each curve. The mean and the median are among them. For each curve, which point is the median and which point is the mean?

Apr 11-7:35 AM

Nov 11-4:31 PM

The scale for SAT math exam scores is set so that the distribution of scores is approximately normal with a mean of 500 and a standard deviation of 100.

a) What is the median SAT score for math?

500

b) You run a tutoring service for students who score between 400 and 600 and hope to do better. What % of SAT scores are between 400 and 600?

The Standard Normal Table

The standard normal table is a table of areas under the standard normal curve. The table entry for each value of z is the area under the curve to the left of z .

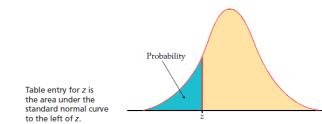

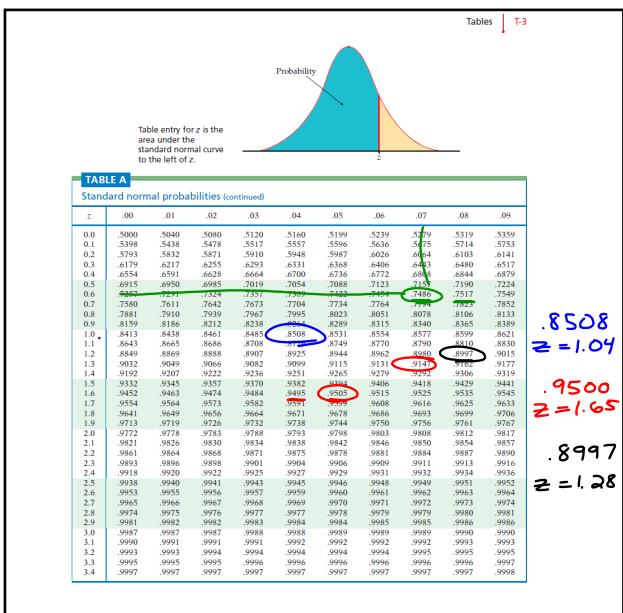

TABLE A Standard normal probabilities

What do you have to score on the math part of the SAT if you want to be in the 85th percentile? The SAT is approximately normal with a mean of 500 and a standard deviation of 100.

$$Z = \frac{x - \mu}{\sigma}$$

$$100 \cdot \frac{1.04}{1} = \frac{x - 500}{100} \cdot 100$$

$$104 = x - 500 + 500$$

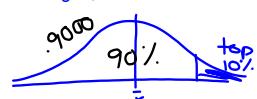

$$(604) = x$$

In 2007, the Major League Baseball batting average was .255 with a standard deviation of .043 and it was normally distributed. If a hitter wanted to be in the top 10% of hitters in the league, what would their batting average have to be?

$$Z = \frac{x - \bar{x}}{s_x}$$

$$.043 \cdot 1.28 = \frac{x - .255}{.043}$$

$$\begin{aligned} .055 &= x - .255 \\ + .255 & \\ (.310) &= x \end{aligned}$$
