## 2010 AP® CALCULUS BC FREE-RESPONSE QUESTIONS

- 5. Consider the differential equation  $\frac{dy}{dx} = 1 y$ . Let y = f(x) be the particular solution to this differential equation with the initial condition f(1) = 0. For this particular solution, f(x) < 1 for all values of x.
  - (a) Use Euler's method, starting at x = 1 with two steps of equal size, to approximate f(0). Show the work that leads to your answer.
  - (b) Find  $\lim_{x\to 1} \frac{f(x)}{x^3-1}$ . Show the work that leads to your answer.
  - (c) Find the particular solution y = f(x) to the differential equation  $\frac{dy}{dx} = 1 y$  with the initial condition f(1) = 0.

$$f(x) = \begin{cases} \frac{\cos x - 1}{x^2} & \text{for } x \neq 0\\ -\frac{1}{2} & \text{for } x = 0 \end{cases}$$

- 6. The function f, defined above, has derivatives of all orders. Let g be the function defined by  $g(x) = 1 + \int_0^x f(t) dt$ .
  - (a) Write the first three nonzero terms and the general term of the Taylor series for  $\cos x$  about x = 0. Use this series to write the first three nonzero terms and the general term of the Taylor series for f about x = 0.
  - (b) Use the Taylor series for f about x = 0 found in part (a) to determine whether f has a relative maximum, relative minimum, or neither at x = 0. Give a reason for your answer.
  - (c) Write the fifth-degree Taylor polynomial for g about x = 0.
  - (d) The Taylor series for g about x = 0, evaluated at x = 1, is an alternating series with individual terms that decrease in absolute value to 0. Use the third-degree Taylor polynomial for g about x = 0 to estimate the value of g(1). Explain why this estimate differs from the actual value of g(1) by less than  $\frac{1}{6!}$ .

# 2006 AP® CALCULUS BC FREE-RESPONSE QUESTIONS (Form B)

5. Let f be a function with f(4) = 1 such that all points (x, y) on the graph of f satisfy the differential equation

$$\frac{dy}{dx} = 2y(3-x).$$

Let g be a function with g(4) = 1 such that all points (x, y) on the graph of g satisfy the logistic differential equation

$$\frac{dy}{dx} = 2y(3-y).$$

- (a) Find y = f(x).
- (b) Given that g(4) = 1, find  $\lim_{x \to \infty} g(x)$  and  $\lim_{x \to \infty} g'(x)$ . (It is not necessary to solve for g(x) or to show how you arrived at your answers.)
- (c) For what value of y does the graph of g have a point of inflection? Find the slope of the graph of g at the point of inflection. (It is not necessary to solve for g(x).)
- 6. The function f is defined by  $f(x) = \frac{1}{1+x^3}$ . The Maclaurin series for f is given by

$$1 - x^3 + x^6 - x^9 + \dots + (-1)^n x^{3n} + \dots$$

which converges to f(x) for -1 < x < 1.

- (a) Find the first three nonzero terms and the general term for the Maclaurin series for f'(x).
- (b) Use your results from part (a) to find the sum of the infinite series  $-\frac{3}{2^2} + \frac{6}{2^5} \frac{9}{2^8} + \dots + (-1)^n \frac{3n}{2^{3n-1}} + \dots$
- (c) Find the first four nonzero terms and the general term for the Maclaurin series representing  $\int_0^x f(t) dt$ .
- (d) Use the first three nonzero terms of the infinite series found in part (c) to approximate  $\int_0^{1/2} f(t) dt$ . What are the properties of the terms of the series representing  $\int_0^{1/2} f(t) dt$  that guarantee that this approximation is within  $\frac{1}{10,000}$  of the exact value of the integral?

# 2004 AP® CALCULUS BC FREE-RESPONSE QUESTIONS (Form B)

- 5. Let g be the function given by  $g(x) = \frac{1}{\sqrt{x}}$ .
  - (a) Find the average value of g on the closed interval [1, 4].
  - (b) Let S be the solid generated when the region bounded by the graph of y = g(x), the vertical lines x = 1 and x = 4, and the x-axis is revolved about the x-axis. Find the volume of S.
  - (c) For the solid S, given in part (b), find the average value of the areas of the cross sections perpendicular to the x-axis.
  - (d) The average value of a function f on the unbounded interval  $[a, \infty)$  is defined to be  $\lim_{b\to\infty} \left[ \frac{\int_a^b f(x) \, dx}{b-a} \right]$ . Show that the improper integral  $\int_4^\infty g(x) \, dx$  is divergent, but the average value of g on the interval  $[4, \infty)$  is finite.

- 6. Let  $\ell$  be the line tangent to the graph of  $y = x^n$  at the point (1, 1), where n > 1, as shown above.
  - (a) Find  $\int_0^1 x^n dx$  in terms of n.
  - (b) Let T be the triangular region bounded by  $\ell$ , the x-axis, and the line x = 1. Show that the area of T is  $\frac{1}{2n}$ .
  - (c) Let S be the region bounded by the graph of  $y = x^n$ , the line  $\ell$ , and the x-axis. Express the area of S in terms of n and determine the value of n that maximizes the area of S.

## 2001 AP® CALCULUS BC FREE-RESPONSE QUESTIONS

# CALCULUS BC SECTION II, Part B

Time—45 minutes
Number of problems—3

No calculator is allowed for these problems.

- 4. Let h be a function defined for all  $x \neq 0$  such that h(4) = -3 and the derivative of h is given by  $h'(x) = \frac{x^2 2}{x}$  for all  $x \neq 0$ .
  - (a) Find all values of x for which the graph of h has a horizontal tangent, and determine whether h has a local maximum, a local minimum, or neither at each of these values. Justify your answers.
  - (b) On what intervals, if any, is the graph of h concave up? Justify your answer.
  - (c) Write an equation for the line tangent to the graph of h at x = 4.
  - (d) Does the line tangent to the graph of h at x = 4 lie above or below the graph of h for x > 4? Why?
- 5. Let f be the function satisfying f'(x) = -3xf(x), for all real numbers x, with f(1) = 4 and  $\lim_{x \to \infty} f(x) = 0$ .
  - (a) Evaluate  $\int_{1}^{\infty} -3x f(x) dx$ . Show the work that leads to your answer.
  - (b) Use Euler's method, starting at x = 1 with a step size of 0.5, to approximate f(2).
  - (c) Write an expression for y = f(x) by solving the differential equation  $\frac{dy}{dx} = -3xy$  with the initial condition f(1) = 4.
