

Anoka-Hennepin Secondary Curriculum Unit Plan

Department:	Science	Course:	Chemistry I (H)	Unit 4 Title:	Molar Quantities	Grade Level(s):	10th
Assessed Trimester:	Trimester A	Pacing:	1 Trimester (Tri A)	Date Created:		Last Revision Date:	6/17/2013

<b>Course Understandings:</b> <i>Students will understand that:</i> <ul style="list-style-type: none"><li>Problems can be solved and knowledge gained in a systematic way: solutions to one problem can create new questions and problems.</li><li>Chemistry is recognized as significant in its application to other disciplines and the world.</li><li>Ideas are expressed symbolically, numerically, and graphically.</li><li>Behavior and properties of materials are organized, classified, and predicted utilizing periodic trends.</li><li>Mathematical relationships are interpreted and manipulated to model the real world.</li><li>The basic building blocks combine and recombine in a variety of ways to make all matter from the simple to the complex.</li><li>The laws of chemistry predict outcomes that impact and apply to daily life.</li></ul>
---

DESIRED RESULTS (Stage 1) - WHAT WE WANT STUDENT TO KNOW AND BE ABLE TO DO?

Established Goals	
<ul style="list-style-type: none"><li><b>MN State Standard:</b> Chemical and physical properties of matter result from the ability of atoms to form bonds. <b>9C.2.1.2.4:</b> Determine the molar mass of a compound from its chemical formula and a table of atomic masses; convert the mass of a molecular substance to moles, number of particles, or volume of gas at standard temperature and pressure. <b>9C.2.1.2.5:</b> Determine percent composition, empirical formulas and molecular formulas of simple compounds.</li><li><b>Literacy Standards:</b> <b>9.13.7.7:</b> Translate quantitative or technical information expressed in words in a text into visual form (e.g., a table or chart) and translate information expressed visually or mathematically (e.g., in an equation) into words.</li></ul>	
Transfer	
<b>Students will be able to independently use their learning to: (product, high order reasoning)</b> <ul style="list-style-type: none"><li>Determine the empirical formula and/or percent composition of a compound in a lab setting. [9C.2.1.2.5]</li></ul>	
Meaning	
<b>Unit Understanding(s):</b> <b>Students will understand that:</b> <ul style="list-style-type: none"><li>The mole concept relates the amount of particles of a substance to its mass. [9C.2.1.2.4]</li></ul>	<b>Essential Question(s):</b> <b>Students will keep considering:</b> <ul style="list-style-type: none"><li>How can we represent a large number of particles in a way that we understand? [9C.2.1.2.4]</li><li>How are the masses of particles and the numbers of particles related? [9C.2.1.2.4]</li><li>What is a mole, and why is it important in chemistry? [9C.2.1.2.4]</li></ul>
Acquisition	
<b>Knowledge - Students will:</b> <ul style="list-style-type: none"><li>Understand the mole concept and define how it relates to molar mass and number of particles. [9C.2.1.2.4]</li></ul>	<b>Skills - Students will:</b> <ul style="list-style-type: none"><li>Calculate the molar mass of a compound. [9C.2.1.2.4]</li><li>Carry out mole conversions. [9C.2.1.2.4]</li></ul>

<b>Reasoning - Students will:</b> <ul style="list-style-type: none"><li>Distinguish between molar mass, formula mass/molecular mass.[9C.2.1.2.4]</li></ul>	<ul style="list-style-type: none"><li>Calculate empirical and molecular formulas. [9C.2.1.2.5]</li><li>Calculate percent composition. [9C.2.1.2.5]</li></ul>

<b>Common Misunderstandings</b> <ul style="list-style-type: none"><li>Lack of understanding that mole is a unit used to count matter particles</li><li>Lack of understanding of the large magnitude of Avogadro’s number.</li><li>Use of scientific notation in communicating large and small quantities.</li><li>Use of correct representative particles in describing molar quantities.</li><li>Students sometimes confuse atomic mass and molar mass.</li><li>Students are challenged when asked the number of atoms in a mole of an element such as chlorine. Because chlorine consist of diatomic molecules one mole of chlorine will have two moles of chlorine atoms.</li><li>Students sometimes misunderstand that one mole of a element has a mass in grams equal to the atomic mass of the element by thinking one mole of an elements is the mass in grams, for example one mole of carbon has a mass of 12.0 grams.</li></ul>	<b>Essential new vocabulary</b> <ul style="list-style-type: none"><li>Mole</li><li>Molar Mass</li><li>Formula Mass</li><li>Molecular Mass</li><li>Particles (ion, atom, formula unit, molecule)</li></ul>
