

Anoka-Hennepin Secondary Curriculum Unit Plan

Department:	Science	Course:	Chemistry I (H)	Unit 6 Title:	Chemical Reactions	Grade Level(s):	10th
Assessed Trimester:	Trimester B	Pacing:	1 Trimester (Tri B)	Date Created:		Last Revision Date:	6/17/2013

Course Understandings: *Students will understand that:*

- Problems can be solved and knowledge gained in a systematic way: solutions to one problem can create new questions and problems.
- Chemistry is recognized as significant in its application to other disciplines and the world.
- Ideas are expressed symbolically, numerically, and graphically.
- Behavior and properties of materials are organized, classified, and predicted utilizing periodic trends.
- Mathematical relationships are interpreted and manipulated to model the real world.
- The basic building blocks combine and recombine in a variety of ways to make all matter from the simple to the complex.
- The laws of chemistry predict outcomes that impact and apply to daily life.

DESIRED RESULTS (Stage 1) - WHAT WE WANT STUDENT TO KNOW AND BE ABLE TO DO?

Established Goals	
<ul style="list-style-type: none"><li><b>Standard:</b> Matter Chemical and physical properties of matter result from the ability of atoms to form bonds. <b>9C.2.1.2.6:</b> Describe the dynamic process by which solutes dissolve in solvents and calculate concentrations, including percent concentration, molarity and parts per million. <b>9.2.1.2.3:</b> Describe a chemical reaction using words and symbolic equations. <b>9.2.1.2.4:</b> Relate exothermic and endothermic reactions to temperature and energy changes. <b>9C.2.1.3.1:</b> Classify chemical reactions as double replacement, single replacement, synthesis, decomposition or combustion. <b>9C.2.1.3.2:</b> Use solubility and activity of ions to determine whether a double replacement or single replacement reaction will occur. <b>9C.2.1.3.3:</b> Relate the properties of acids and bases to the ions they contain and predict the products of an acid-base reaction. <b>9C.2.1.2.7:</b> Explain the role of solubility of solids, liquids and gases in natural and designed systems.</li></ul>	
Transfer	
<b>Students will be able to independently use their learning to: (product, high order reasoning)</b> <ul style="list-style-type: none"><li>Carry out an acid-base titration to find the molarity of an unknown solution. [9C.2.1.2.6 &amp; 9.2.1.2.3 &amp; 9C.2.1.3.3]</li></ul>	
Meaning	
<b>Unit Understanding(s):</b> <b>Students will understand that:</b> <ul style="list-style-type: none"><li>Chemical reactions show the rearrangement of atoms forming new substances. [9.2.1.2.3]</li><li>Strong electrolytes dissociate in solution to form cations and anions. [9C.2.1.2.6]</li></ul>	<b>Essential Question(s):</b> <b>Students will keep considering:</b> <ul style="list-style-type: none"><li>What happens when chemicals dissolve? [9C.2.1.2.6]</li><li>How are new substances formed in a chemical reaction? [9.2.1.2.3]</li><li>Distinguish between different types of chemical reactions [9C.2.1.3.1]</li><li>How do you predict the products of a chemical reaction? [9.2.1.2.3 &amp; 9C.2.1.3.3]</li><li>How do you calculate the concentration of solutions? [9C.2.1.2.6]</li></ul>
Acquisition	
<b>Knowledge - Students will:</b> <ul style="list-style-type: none"><li>Explain how solutes dissolve in polar and nonpolar solvents. [9C.2.1.2.6]</li></ul>	<b>Reasoning - Students will:</b> <ul style="list-style-type: none"><li>Predict the number of moles for a solution if given molarity and volume. [9C.2.1.2.6]</li></ul>

<ul style="list-style-type: none"><li>● Define double replacement (precipitation or acid/base), single replacement (redox), synthesis (redox), decomposition (redox), and combustion (redox). [9C.2.1.3.1]</li><li>● Understand the activity series of metals and halogens. [9C.2.1.3.2]</li><li>● Identify oxidized and reduced half reactions in a redox reaction (single replacement, synthesis, decomposition, or combustion) [9C.2.1.3.1]</li><li>● Know how to use the solubility rules. [9C.2.1.3.2]</li><li>● Identify an acid and base due to the ions that make up the compound. [9C.2.1.3.3]</li><li>● Understand acids and bases properties including pH and reactivity with metals. [9C.2.1.3.3 ]</li><li>● Name acids and bases. [9C.2.1.3.3 ]</li><li>● Understand that some chemical reactions absorb energy (endothermic) and some reactions release energy (exothermic). [9.2.1.2.4]</li></ul>	<ul style="list-style-type: none"><li>● Use solubility rules to predict the solubility of a substance. [9C.2.1.3.2]</li><li>● Distinguish the difference between the types of chemical reactions. [9C.2.1.3.1]</li><li>● Predict the products of a double replacement (precipitation and acid/base) and redox (single replacement, combustion, synthesis, and decomposition) reactions using solubility rules and activity of ions. [9C.2.1.3. &amp; 9C.2.1.3.3]</li></ul> <p><b>Skills - Students will:</b></p> <ul style="list-style-type: none"><li>● Calculate the molarity of a solution. [9C.2.1.2.6]</li><li>● Calculate the mass percent (percent concentration) of a solution. [9C.2.1.2.6]</li><li>● Demonstrate the ability to write formulas from initial reactants and complete a balanced equation. [9.2.1.2.3]</li><li>● Calculate the molarity of a solution from the pH or pOH and vice versa. [9C.2.1.2.6 &amp; 9C.2.1.3.3]</li><li>● Balance a redox reaction in acidic/basic solution using the half reaction method. [9C.2.1.3.1]</li></ul>

<p><b>Common Misunderstandings</b></p> <ul style="list-style-type: none"><li>● Many students think solvents must be liquids.</li><li>● Some students will believe amount of solution is proportional to the molar concentration.</li><li>● When a colorless solute dissolves in water, it is easy for students to think that it "disappeared" without understanding the nature of dissolution.</li><li>● Students don't always realize that dissolving is a physical process and not a chemical reaction.</li><li>● Dilute and Concentrated are often confused with Weak and Strong</li><li>● Students confuse the forces within molecules (intermolecular) and forces between molecules (intramolecular)</li><li>● Lack of understanding that atoms are rearranged during a chemical change, and not destroyed or created.</li><li>● Reactants remain in original form during a chemical reaction.</li><li>● Lack of understanding that the properties of products are not related to the properties of reactants.</li><li>● Misuse of subscripts and coefficients in balancing equations</li><li>● Combustion and all other chemical processes consist of the interaction of substances such that the total mass of material after the reaction is exactly the same as before the reaction.</li></ul>	<p><b>Essential new vocabulary</b></p> <table><tr><td><ul style="list-style-type: none"><li>● Solution</li><li>● Solute</li><li>● Solvent</li><li>● Molarity</li><li>● Mass percent (percent concentration)</li><li>● Solubility</li><li>● Redox</li><li>● Precipitation</li><li>● Neutralization</li><li>● Activity Series</li><li>● Acid</li><li>● Base</li><li>● Oxidation</li></ul></td><td><ul style="list-style-type: none"><li>● Reduction</li><li>● Half reactions</li><li>● Oxidizing Agent</li><li>● Reducing Agent</li><li>● pH, pOH</li><li>● Solubility Rules</li><li>● Double Replacement</li><li>● Single Replacement</li><li>● Synthesis</li><li>● Decomposition</li><li>● Combustion</li><li>● Titration</li></ul></td></tr></table>	<ul style="list-style-type: none"><li>● Solution</li><li>● Solute</li><li>● Solvent</li><li>● Molarity</li><li>● Mass percent (percent concentration)</li><li>● Solubility</li><li>● Redox</li><li>● Precipitation</li><li>● Neutralization</li><li>● Activity Series</li><li>● Acid</li><li>● Base</li><li>● Oxidation</li></ul>	<ul style="list-style-type: none"><li>● Reduction</li><li>● Half reactions</li><li>● Oxidizing Agent</li><li>● Reducing Agent</li><li>● pH, pOH</li><li>● Solubility Rules</li><li>● Double Replacement</li><li>● Single Replacement</li><li>● Synthesis</li><li>● Decomposition</li><li>● Combustion</li><li>● Titration</li></ul>
<ul style="list-style-type: none"><li>● Solution</li><li>● Solute</li><li>● Solvent</li><li>● Molarity</li><li>● Mass percent (percent concentration)</li><li>● Solubility</li><li>● Redox</li><li>● Precipitation</li><li>● Neutralization</li><li>● Activity Series</li><li>● Acid</li><li>● Base</li><li>● Oxidation</li></ul>	<ul style="list-style-type: none"><li>● Reduction</li><li>● Half reactions</li><li>● Oxidizing Agent</li><li>● Reducing Agent</li><li>● pH, pOH</li><li>● Solubility Rules</li><li>● Double Replacement</li><li>● Single Replacement</li><li>● Synthesis</li><li>● Decomposition</li><li>● Combustion</li><li>● Titration</li></ul>
