

Anoka-Hennepin Secondary Curriculum Unit Plan

Department:	Science	Course:	Chemistry I	Unit 7 Title:	Chemical Reactions	Grade Level(s):	10th
Assessed Trimester:	Trimester B	Pacing:	10 - 15 Days	Date Created:	6/7/2012	Last Revision Date:	6/24/2014

Course Understandings: *Students will understand that:*

- Problems can be solved and knowledge gained in a systematic way: solutions to one problem can create new questions and problems.
- Chemistry is recognized as significant in its application to other disciplines and the world.
- Ideas are expressed symbolically, numerically, and graphically.
- Behavior and properties of materials are organized, classified, and predicted utilizing periodic trends.
- Mathematical relationships are interpreted and manipulated to model the real world.
- The basic building blocks combine and recombine in a variety of ways to make all matter from the simple to the complex.
- The laws of chemistry predict outcomes that impact and apply to daily life.

DESIRED RESULTS (Stage 1) - WHAT WE WANT STUDENT TO KNOW AND BE ABLE TO DO?

Established Goals
<ul style="list-style-type: none"><li>• <b>Standard:</b><ul style="list-style-type: none"><li><b>9.2.1.2.2:</b> Explain how the rearrangement of atoms in a chemical reaction illustrates the law of conservation of mass. (May also be taught in the Stoichiometry Unit)</li><li><b>9C.2.1.3.1:</b> Classify chemical reactions as double replacement, single replacement, synthesis, decomposition or combustion.</li><li><b>9.2.1.2.3:</b> Describe a chemical reaction using words and symbol equations. For example: The reaction of hydrogen gas with oxygen gas can be written: <math>2\text{H}_2 + \text{O}_2 \rightarrow 2\text{H}_2\text{O}</math></li><li><b>9C.2.1.3.2:</b> Use solubility and activity of ions to determine whether a double replacement or single replacement reaction will occur.</li><li><b>9C.2.1.3.3:</b> Relate the properties of acids and bases to the ions they contain and predict the products of an acid-base reaction (medium).</li><li><b>9C.2.1.3.3:</b> Relate the properties of acids and bases to the ions they contain (low) and predict the products of an acid-base reaction.</li></ul></li><li>• <b>Standard:</b> Matter Chemical and physical properties of matter result from the ability of atoms to form bonds. <b>Benchmark:</b><ul style="list-style-type: none"><li><b>ACT-S-3:</b> Interpolate between data points in a table or graph</li><li><b>ACT-S-9:</b> Predict the results of an additional trial or measurement in an experiment</li><li><b>ACT-S-10:</b> Determine the experimental conditions that would produce specified results</li></ul></li><li>• <b>Standard:</b> Matter Chemical reactions describe a chemical change in which one or more reactants are transformed into one or more products. <b>Benchmark:</b> Literacy Standards:<ul style="list-style-type: none"><li><b>9.13.3.3:</b> Follow precisely a complex multistep procedure when carrying out experiments, designing solutions, taking measurements, or performing technical tasks, attending to special cases (constraints) or exceptions defined in the text.</li></ul></li></ul>
Transfer
<p><b>Students will be able to independently use their learning to: (product, high order reasoning)</b></p> <ul style="list-style-type: none"><li>• Better control and prepare for chemical reactions in life. (Rust prevention, fire prevention, etc)</li></ul>

Meaning	
<b>Unit Understanding(s):</b> <b>Students will understand that:</b> <ul style="list-style-type: none"><li>Chemical reactions show the rearrangement of atoms forming new substances.</li></ul>	<b>Essential Question(s):</b> <b>Students will keep considering:</b> <ul style="list-style-type: none"><li>What happens when chemicals dissolve?</li><li>How are new substances formed in a chemical reaction?</li></ul>
Acquisition	
<b>Knowledge - Students will:</b> <ul style="list-style-type: none"><li>Know the symbols used in chemical reactions (H) 9.2.1.2.3</li><li>Know that the driving forces in a chemical reaction are the formation of a solid, formation of a gas, formation of water and the transfer of electrons (L) 9.2.1.2.3</li><li>Know that a complete ionic equation contains all components in a double displacement reaction. (M)* 9C2.1.3.1</li><li>Know that a net ionic equation describes the chemical change in a double displacement reaction. (M)* 9C2.1.3.1</li><li>Know that acids and bases dissociate into aqueous solutions when put in water. (M) 9C2.1.3.3</li><li>Recognize that acids react with bases in a double replacement reaction. (M) 9C2.1.3.3</li><li>Recognize that the formation of water is the driving force in an acid-base reaction. (L) 9C2.1.3.3</li></ul> <b>Reasoning - Students will:</b> <ul style="list-style-type: none"><li>Use a solubility table to predict whether a substance is soluble in water. (M) 9C2.1.3.2</li><li>Classify chemical reactions as double replacement, single replacement, synthesis, decomposition or combustion (H) 9C2.1.3.1</li><li>Interpret the activity series as a list of the relative reactivity of ions. (M) 9C2.1.3.2</li><li>Predict the products of an acid-base reaction. (M) 9C 2.1.3.3</li><li>Relate the properties of an acid to the presence of the hydrogen ion in the aqueous solution of the compound. (L) 9C2.1.3.3</li><li>Relate the properties of a base to the presence of the hydroxide ion in aqueous solution of the compound. (L) 9C2.1.3.3</li></ul>	<b>Skills - Students will:</b> <ul style="list-style-type: none"><li>Predict products in precipitate, neutralization, single replacement, synthesis, decomposition and combustion reactions. 9C2.1.3.1 (M)</li><li>Use a solubility table to determine whether a double replacement reaction will occur. 9C2.1.3.2 (M)</li><li>Use a complete ionic equation and a net ionic equation to describe a double displacement reaction. 9C.2.1.3.1 (M)</li><li>Use the activity of ions to determine whether a single replacement reaction will occur 9C2.1.3.2 (M)</li></ul>

<b>Common Misunderstandings</b> <ul style="list-style-type: none"><li>Some students will believe amount of solution is proportional to the molar concentration.</li><li>When a colorless solute dissolves in water, it is easy for students to think that it "disappeared" without understanding the nature of dissolution.</li><li>Students don't always realize that dissolving is a physical process and not a chemical reaction.</li><li>Dilute and Concentrated are often confused with Weak and Strong</li><li>Students confuse the forces within molecules (intermolecular) and forces between molecules (intramolecular)</li><li>Lack of understanding that atoms are rearranged during a chemical change, and not destroyed or created.</li><li>Reactants remain in original form during a chemical reaction.</li><li>Lack of understanding that the properties of products are not related to the properties of reactants.</li><li>Misuse of subscripts and coefficients in balancing equations</li></ul>	<b>Essential new vocabulary</b> <ul style="list-style-type: none"><li>Chemical equation</li><li>Product</li><li>Reactant</li><li>Yield</li><li>Precipitate</li><li>Aqueous</li><li>Activity series</li><li>Spectator ion</li><li>Acid</li><li>Base</li><li>Neutralize,</li><li>Ion</li><li>Hydroxide ion</li><li>Hydrogen Bond</li><li>Hydrogen Ion [Hydronium (LOW)]</li></ul>
