

Anoka-Hennepin Secondary Curriculum Unit Plan

Department:	Social Studies	Course:	AP Geography	Unit 2 Title:	Population	Date Created:	June 2013
Assessed Trimester:	A	Pacing:	12-16 Days	Grade Level(s):	9	Last Revision Date:	

<b>Course Understandings:</b> <i>Student will understand that:</i> <ul style="list-style-type: none"><li>Interpret maps and analyze geospatial data.</li><li>Understand and explain the implications of associations and networks among phenomena in places.</li><li>Recognize and interpret the relationships among patterns and processes at different scales of analysis.</li><li>Define regions and evaluate the regionalization process.</li><li>Characterize and analyze changing interconnections among places.</li></ul>
--

DESIRED RESULTS (Stage 1) - WHAT WE WANT STUDENT TO KNOW AND BE ABLE TO DO?

Established Goals		
9.3.3.5.2 Use the demographic transition model to analyze and explain the impact of changing birth and death rates in major world regions.		
9.3.3.5.3 Compare the population characteristics of places at a range of scales using population pyramids, birth and death rates, and other key demographic variables.		
9.3.3.5.4 Explain migration patterns in the modern era at a range of scales, local to global.		
Transfer		
Students will be able to independently use their learning to: (product, high order reasoning) <ul style="list-style-type: none"><li>Students will be able to critically analyze how place affects population</li><li>Students will be able to critically examine governmental policies and their effect on population</li><li>Students will be able to discuss the affects of migration on plae</li></ul>		
Meaning		
Unit Understanding(s): Students will understand that: <ul style="list-style-type: none"><li></li></ul>	Essential Question(s): Students will keep considering: <ul style="list-style-type: none"><li>Do we have enough resources to sustain a growing population?</li><li>Where are the people?</li><li>Why do people live where they live?</li><li>What did the world’s population look like in the past?</li><li>What does the world’s population look like today?</li><li>What will the world’s population look like in the future?</li><li>How will an increasing population affect earth’s resources?</li><li>Why do people move?</li><li>What are the consequences of movement?</li></ul>	
Acquisition		
Knowledge - Students will: <ul style="list-style-type: none"><li>Identify human population distribution.</li><li>Define the demographic transition model.</li><li>Identify population pyramids with death rates.</li><li>Identify local and global migration patterns.</li></ul>	Reasoning - Students will: <ul style="list-style-type: none"><li>Describe the patterns of human population distribution in the United States and major regions of the world.</li><li>Interpret the impact of changing birth and death rates.</li><li>Compare the population characteristics of places at a range of scales using population pyramids, birth and death rates, and other key demographic variables.</li><li>Explain migration patterns in the modern era at a range of scales</li></ul>	Skills - Students will: <ul style="list-style-type: none"><li>Use the demographic transition model to analyze and explain the impact of changing birth and death rates in major world regions.</li><li>Evaluate the role migration places on differnt places</li></ul>

<b>Common Misunderstandings</b> <ul style="list-style-type: none"><li>• How the Demographic Transition Model explains population growth trends of countries.</li><li>• Obstacles that immigrants face</li><li>• How international migration can change countries and societies.</li></ul>	<b>Essential new vocabulary</b> <div>Epidemiologic transitionPopulation pyramid</div> <div>Natural increase rateDoubling time</div> <div>(NIR)Refugees</div> <div>EmigrationTransition model</div> <div>DemographicGendered space</div> <div>Transition ModelJ-curve</div> <div>DemographicMaladaptation</div> <div>momentumMalthus, Thomas</div> <div>Demographic regionsMortality</div> <div>DemographicDisease diffusion</div> <div>Transition modelEcumene</div> <div>Dependency ratioCohort</div> <div>Diffusion of fertilityDemographic equation</div> <div>controlNatality</div> <div>Infant Mortality RateNeo-Malthusian</div> <div>(IMR)Overpopulation</div> <div>Epidemiological</div> <div>Population</div> <div>Age distribution</div> <div>Carrying capacity</div> <div>Population densities</div> <div>Population distributions</div> <div>Population explosion</div> <div>Population projection</div> <div>S-curve</div> <div>Sex ratio</div> <div>Standard of living</div> <div>Sustainability</div> <div>Underpopulation</div> <div>Zero population growth</div> <div>Population pyramid</div> <div>Rate of natural increase</div> <div>Migration</div> <div>Activity space</div> <div>Chain migration</div> <div>Cyclic movement</div> <div>Distance decay</div> <div>Forced</div> <div>Intervening opportunity</div> <div>Migration patterns</div> <div>• Intercontinental</div> <div>• Interregional</div> <div>• Rural-urban</div> <div>Migratory movement</div> <div>Gravity model</div> <div>Internal migration</div> <div>Periodic movement</div> <div>Personal space</div> <div>Place utility</div> <div>Push-pull factors</div> <div>Refugee</div> <div>Space-time prism</div> <div>Step migration</div> <div>Transhumance</div> <div>Transmigration</div> <div>Voluntary</div>
