Solitaire:

Use the number cards 1-10 4-sets)
Pick a target number 6-10. Example 10. Next lay the cards down face up in a 3x3 array. Keep passing out the cards (making 9 piles) until you run out. Now find matching pairs to make ten. You can only remove the top cards (no pulling cards from underneath the top card of a pile). When you can't make any more pairs the game is over. If you find yourself counting a lot, use the 10 frame cards.
