

Cross Out! (2 players, 2 dice, 1 paper and a pencil)

Write the numbers 1-12 in a row across the paper. Have your partner do the same. Flip a coin or roll a die to see who goes first. First person: Roll your dice. Add the two together to find the sum (count all the dots). Now you can choose to cross out whichever two numbers you want as long as they equal the sum you rolled. Example: rolled 5 and 2. So cross off the 7 OR cross off the 5 and 2. Now your partner goes, doing the same. Keep rolling and crossing out the numbers until you cannot cross out any other numbers. The last person to cross off a number is the winner.
