

Number Hunt : (Use the number cards)

Pull out 10 cards from one decade (ie 10 11 12 13 14 15 16 17 18 19) or 10 numbers that cross a decade (5 cards from 10s and 5 cards from 20s. Lay the cards face down mixed up in 1 row. Pick one card up and put a penny to keep the place of that card. Then Count BW from right to left to find where the card should be placed. (ie If the card is in the 10s family child may start at 19 and count back until they find where their card goes) Pick up that face down card and put your card face up in its place. Now do the same for the card you just picked up. Keep going until all cards are placed in order.

Now this is a fun part. Keep them in order but flip them over face down. Have mom or dad turn one card over at a time moving backward (or forward if that is what you are working on) with you trying to name the card before they turn it over. If you name them all before they get them turned over, you win. If not, try again to practice. You can play the same game counting forward too.
